

machine

MANUFACTURED BY ESTEAM CLEANING SYSTEMS

 **1700** 

The E1700 was designed to increase productivity with a 17 gallon solution tank and 14.5 gallon recovery tank, substantially extending cleaning time between draining and filling. With two different pump options and two different vacuum motor configurations, you can choose the machine that best fits your needs. The E1700 is also available with an 1850 watt internal inline heater that will produce water temperatures up to 200°F.

To protect your investment the E1700 is backed by a limited lifetime warranty on the rotomolded polyethylene body housing and one year on the vacuum motors and solution pump from any defects in material or workmanship.

All models of the E1700 series are CSA Approved
