

TM EXTERNAL PUMP OUT

The External Pump-Out is designed to keep your truckmount cleaning without having to dump the recovery tank waste water. It can be installed into any truckmounted system and installed into any auxiliary switch. It mounts on the floor near the recovery tank. Extra-large valves allow larger solids and debris to be passed without clogging the system. The kit has been prewired and preassembled, making the installation quick and easy.

FEATURES:

- ▶ *Extra Large Valves allow debris to pass through without plugging*
- ▶ *Flow rate 8 Gallons per minute*
- ▶ *Prewired and assembled ready for installation*

Part #	Description
237-040	Cleanco TM External Pump Out Auto Drain

There are laws throughout North America that prohibit the dumping of soiled water from carpet cleaning equipment in any place but a sanitary treatment system.

The water recovered into your unit's recovery tank contains materials such as detergent residue and many different soil contaminants removed from the carpet you have cleaned. These materials must be processed before they are safe to re-enter our streams, rivers and reservoirs. Do not dispose of waste water into storm drains, gutters, streams, reservoirs, etc. Dispose of waste water into a sanitary treatment system (check local regulations).
