

HYDRO-GLIDE™

Wand Glide

TEFLON® WAND GLIDE

Teflon Glide

Teflon has a much lower coefficient of friction than steel. This allows your wand to glide across the carpet 16 x's easier than steel! Teflon is also 'self-healing', meaning scratches will quickly be removed from the surface during use so it always stays smooth.

Wand Glides Allow You To:

▶ **Reduce friction.**

Glides make it so your wand moves effortlessly across carpeted surfaces.

▶ **Improve lift and air velocity.**

Putting a glide on your wand decreases the opening of your vacuum inlet. This has the effect of dramatically increasing air velocity and lift.

▶ **Eliminate wand chatter.**

This especially important when cleaning commercial glue down. Wand glides make your wand move smoothly across carpet eliminating chatter and the subsequent streaking.

▶ **Reduce damage.**

A glide protects both your stainless steel wand head, as well as your customer's baseboards and property.

▶ **Work faster.**

Since a wand glide makes pushing a wand so much easier, you'll cruise through jobs and feel like an 18 year old at the end of the day instead of an 81 year old.
